### **BG Controls appointed as EFT distribution partner**

BG Controls has announced that it has been selected as a distributor for energy management specialist, EFT Control Systems.

Based in Ireland, EFT Control Systems provides energy management solutions through its sophisticated data collection technology. Its products record and analyse the energy consumption of utilities for clients across a broad range of sectors – from large industrial sites to public sector buildings and small businesses. EFT's flagship product, Energy Manager, provides a powerful suite of advanced energy monitoring and reporting functionalities combined with advanced 3D graphical capabilities. It transforms raw data into essential energy information that can help its clients to realise significant cost savings.

As a UK distributor, BG Controls will use its expertise to integrate EFT products into a wide variety of applications across the country. Indeed, BG has already carried out successful pilot projects at two hospitals and a school. In addition, BG will connect the systems to its central service bureau, where trained engineers will analyse the incoming data and provide clients with suggestions to help reduce their energy consumption and lower their utility bills.

“EFT is committed to optimising its clients’ business energy needs and to do this we only partner with the best distributors worldwide,” says Managing Director of EFT Control Systems, Craig Ennis. “Given that BG Controls is growing rapidly and has extensive industry experience and connections, we believe they are well positioned to deliver our world-class energy solutions.”

“We’re delighted to be working in partnership with EFT,” adds BG Controls’ Managing Director, Duncan Biggins. “The company is one of the leaders in its field and its energy management products are the perfect complement to our expanding portfolio of building controls services.”
